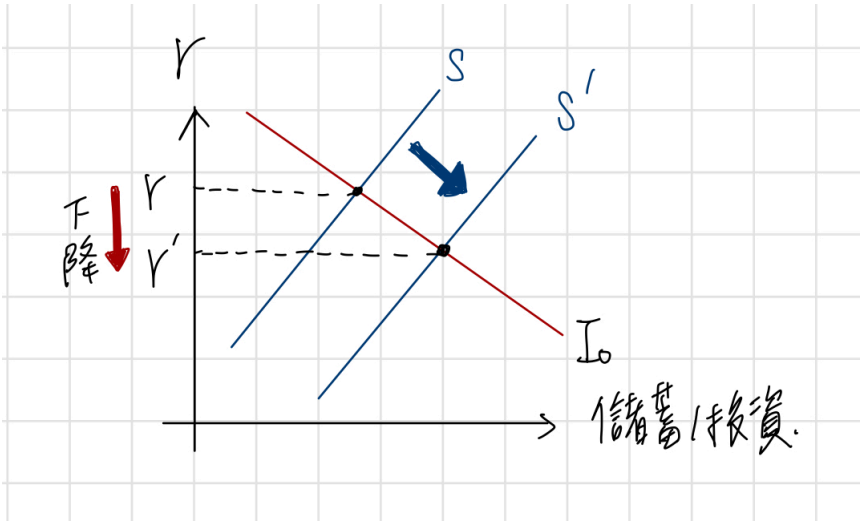
Question 1



Question 2

2-(a)

$$\frac{b_1}{p_1} = y_1 - c_1 - i_1$$

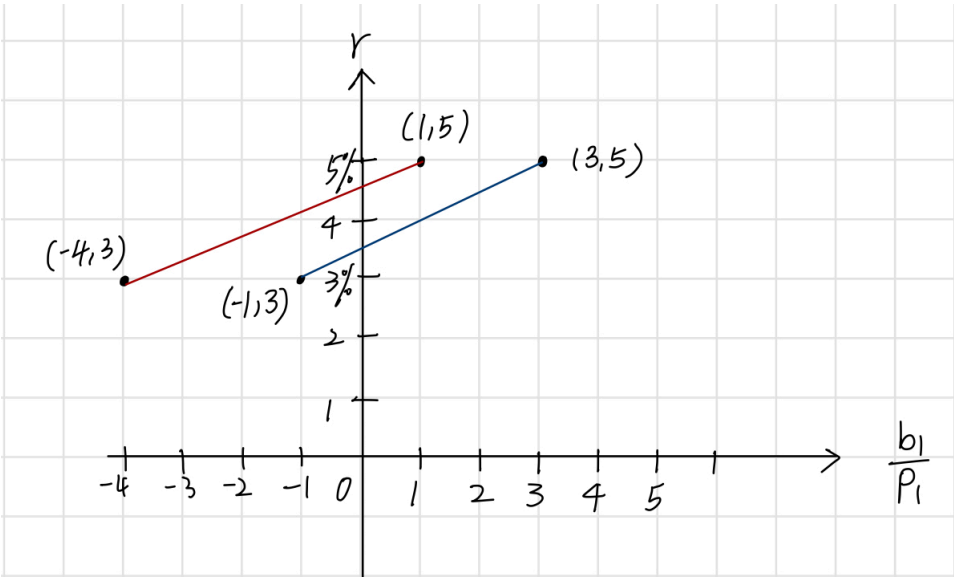
- 甲：$20 - 20 - 4 = -4$ （單位）
- 乙：$15 - 15 - 1 = -1$ （單位）

2-(b)

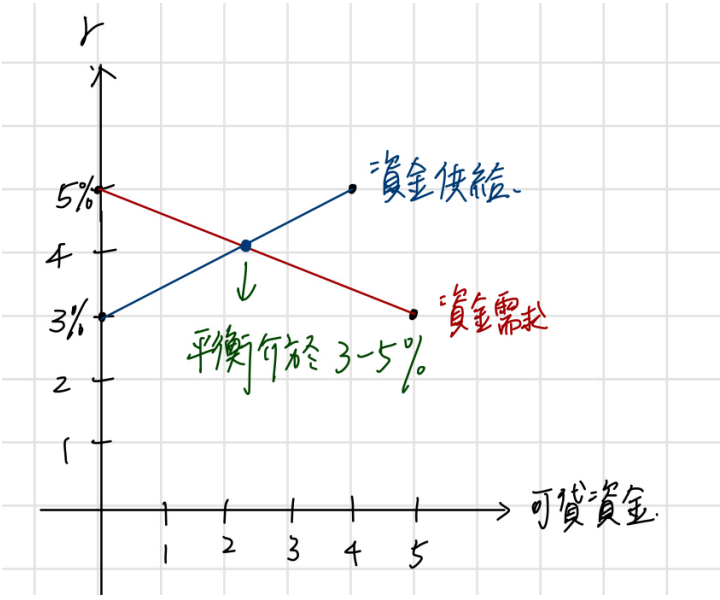
$$\frac{b_1}{p_1} = y_1 - c_1 - i_1$$

- 甲：$22 - 18 - 3 = 1$ （單位）
- 乙：$17 - 14 - 0 = 3$ （單位）

2-(c)



2-(d)



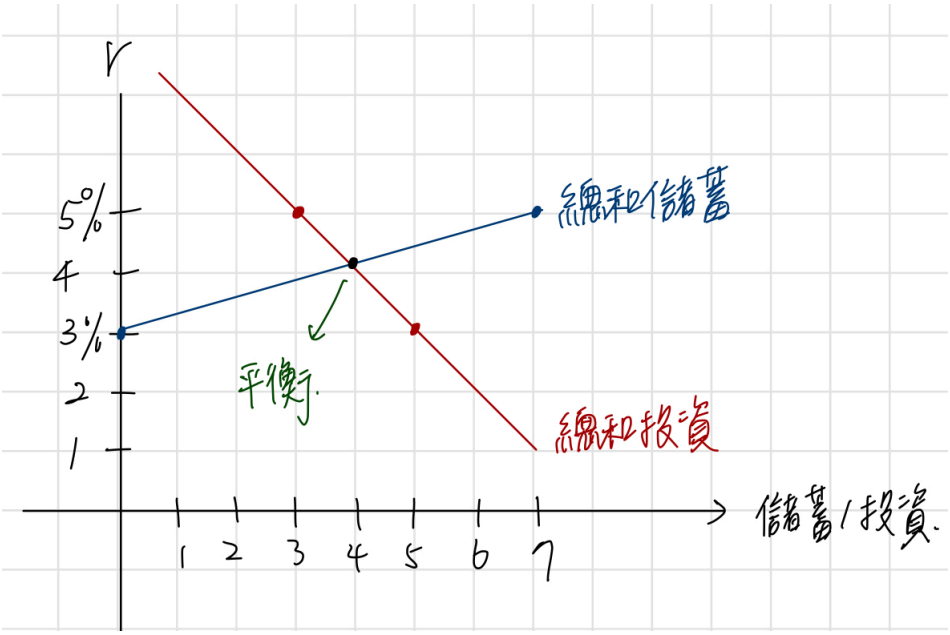
- 實質利率爲 5% 時：總和供給爲 4（單位）
- 實質利率爲 3% 時：總合需求爲 5（單位）

2-(e)

介於 3 至 5% 之間

2-(f)

- 利率爲 3% 時
  - 總和儲蓄：$0 + 0 = 0$
  - 總和投資：$4 + 1 = 5$
- 利率爲 5% 時
  - 總和儲蓄：$4 + 3 = 7$
  - 總和投資：$3 + 0 = 3$

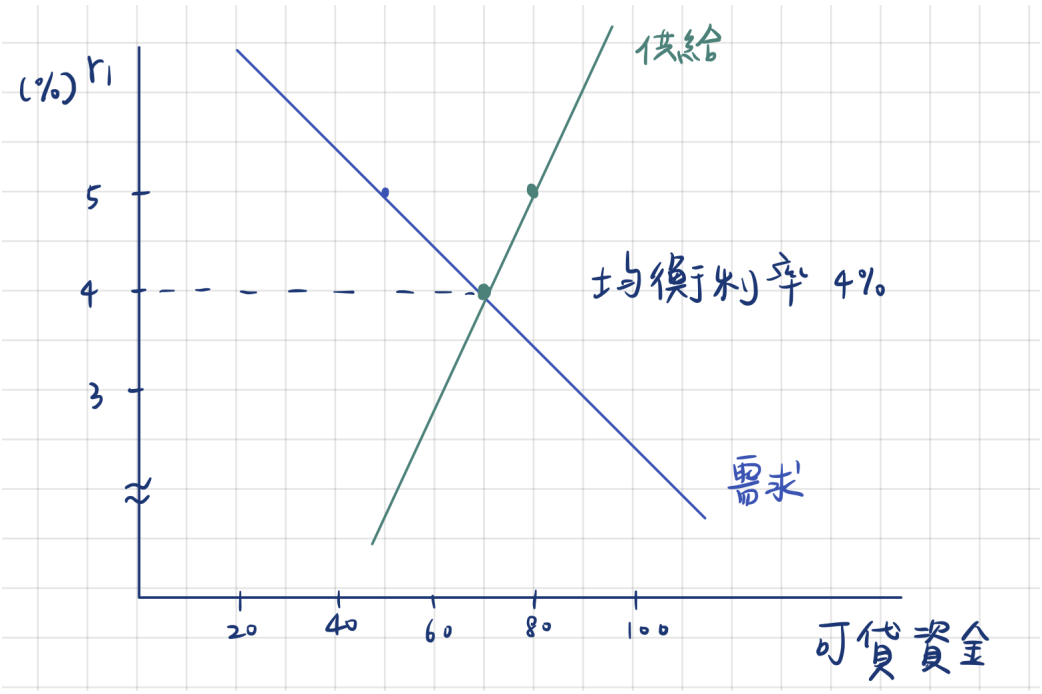


2-(g)

大於 0 ，由 2(f) 之圖表判斷出，當總和儲蓄等於總和投資時達到平衡，而此時平衡的金額爲正。

Question 3

3-(a)

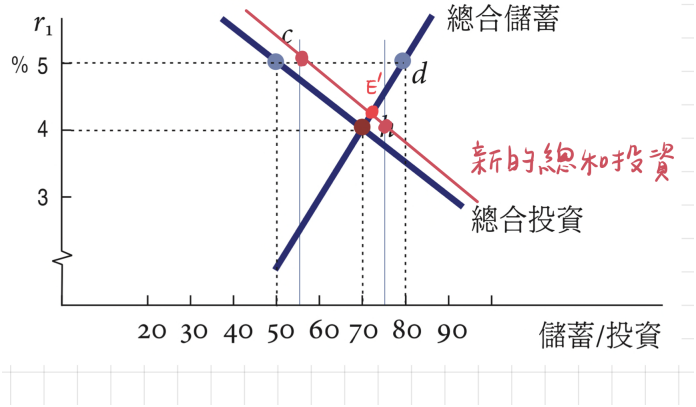


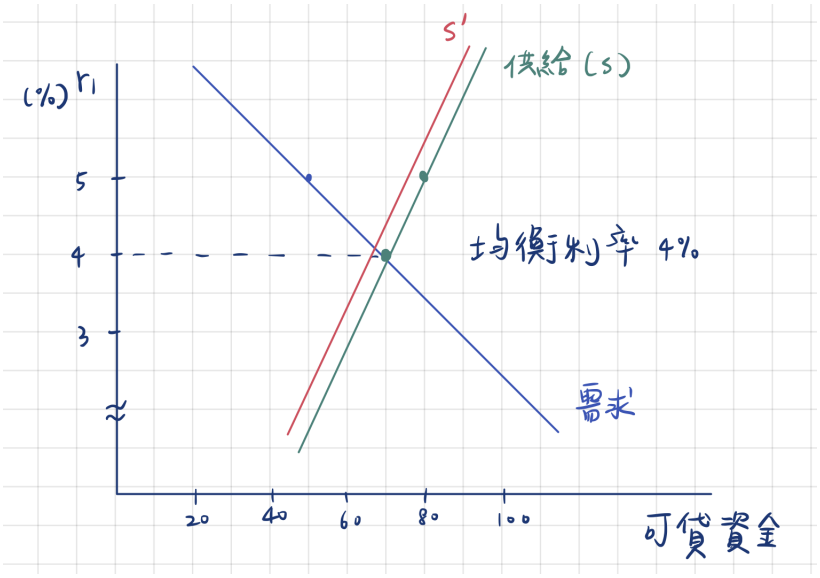
3-(b)

$$\frac{B_1}{P_1} = S_1 - I_1 = 30$$

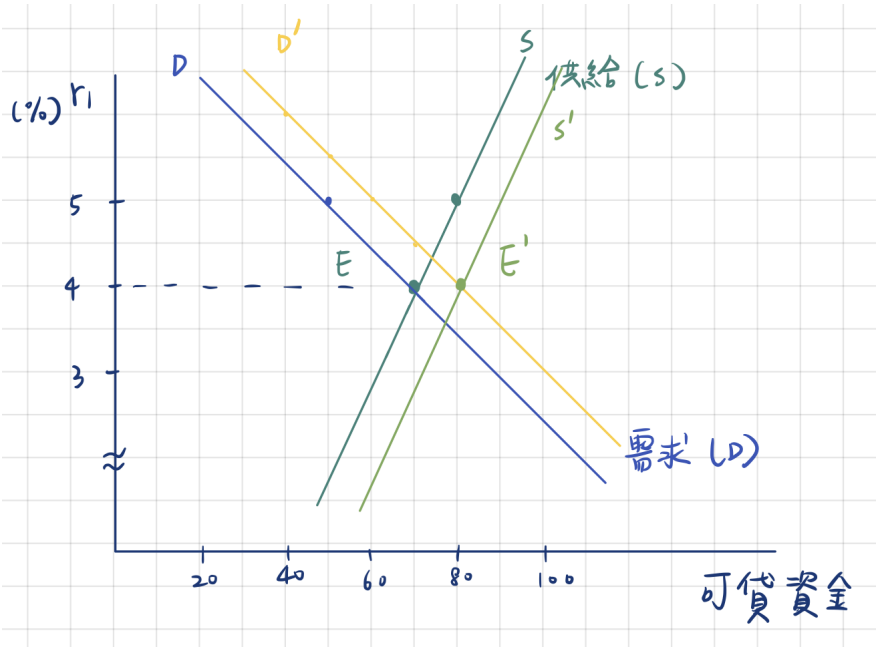
3-(c)

均衡利率會較高，借貸市場的供給線往左移 ($S \to S'$)





Question 4



$$D \to D'$$

$$S \to S'$$

$$E \to E'$$

均衡利率不變，仍爲 4%

Question 5

5-(a)

- Generation Z: Born after 1997
- Baby-boomers: Born 1946 - 1964

5-(b)

At least 5%

5-(c)

About 3%.
Quote To do this, they assume that the real return on equities will be equal to the inflation-adjusted return on a risk-free asset (represented by Treasury bills), which they estimate at -0.5%, plus a "risk premium"for buying equities of about 3.5%, for a real return of just 3%.

5-(d)

Mr Marsh recommends adopting the time-honoured (if unexciting) principles of long-term investment, including **starting early**, **diversifying risk** and **avoiding high management fees.**

Rather than checking the value of their investments every ten minutes and trading frantically, they should exercise **patience** and sit out temporary shocks and turbulence.
由上述引文可知：及早準備、分散風險、避免高的管理費用（去買 ETF），並且對股市的波動保持耐心是作者給予 Generation Z 在投資策略上的建議。

5-(e)

The quick bounce back is rare in equity market, and we shouldn't concerned it as normal. That's why we are "lucky".
